

DISCOVER SENSITIVE DATA WORKSHOP

Discover risks from dark data and learn how to address them

As your business-critical data expands and your workforce shifts to remote work, having an integrated approach to compliance is more important than ever. This means that protecting your data wherever it goes is critical to ensuring trust and meeting compliance requirements. But before you can secure it, you need to know what data you have, where it is, how it's being used, and any compliance risks that may exist.

Transparency's Discover Sensitive Data Workshop is a 3 day engagement which will give you the insights you need to better discover, protect and govern your corporate data. During this workshop, our Microsoft Cloud experts will work with you to:

- Document your compliance objectives and strategy, including compliant Teams deployment and use
- Give you an understanding of how to mitigate and protect against potential compliance risks from dark data
- Demonstrate ways to accelerate your compliance journey with the latest Microsoft technologies
- Provide actionable next steps based on your organisation's unique needs and objectives

During the workshop you will...

Understand the hidden compliance risks of dark data

Assess your organisation's dark data risks with Data Risk Check

Assess your environment against the Data Protection Baseline

Receive an analysis and report on findings and associated risks

Learn about Microsoft tools and services that can mitigate risks

Explore recommendations and next steps

Data Risk Check uncovers data that can cause a compliance risk

The Data Risk Check is the core activity of the Discover Sensitive Data workshop. The activity is spread out over several weeks to allow time to run on top of your Cloud infrastructure and surface privacy and regulatory risks in organisational data. Data Risk Check leverages automated Microsoft 365 tools and services to discover data stored in the Microsoft Cloud and identify potential problem areas.

The automated discovery process will analyse your existing data for:

Sensitive information and intellectual property

Unused or "stale" data

Risky or suspicious activities

The Data Risk Check in its core will identify privacy and regulatory risks in Exchange Online, SharePoint Online, OneDrive for Business and Teams and can be extended with optional modules to scan on-premises data repositories and Windows 10 Endpoints.

DID YOU KNOW? 80% of of corporate data is “dark” – it’s not classified, protected or governed!¹

A clear look into Microsoft’s approach to compliance and how it relates to your organisation.

Data Protection Baseline assessment

An in-depth report containing suggestions and key improvement actions.

Advice for the future

A set of long-term recommendations on your compliance strategy, with key initiatives and tactical next steps.

Why choose Transparency?

Transparency are a Microsoft pureplay technology partner at the forefront of the latest technology. We have one simple goal: to work in partnership with you to ensure that your investment in the Cloud truly makes a difference to your business. We pledge to support you with honesty and integrity, providing a transparent, straightforward approach on your journey to digital transformation.

When choose us as your technology partner, here’s what you get:

Dedication to
service
excellence

Cloud solutions
that help achieve
outstanding ROI

Exceptional,
people-led
culture

Commitment to
partnership and
integrity

Passion for what
we do and the
people we support

The very best
technical experts
at your disposal
