

# HYBRID CLOUD SECURITY WORKSHOP

## Identify any threats and vulnerabilities in your environment

With 2020 becoming the busiest year ever for cyberattacks (up by 20% from 2019)<sup>1</sup>, it's never been more vital to ensure that your IT environment is kept secure with enterprise-grade solutions. But hybrid environments bring an extra level of complexity.

Run by our expert consultants, Transparency's 3-day Hybrid Cloud Security Workshop will allow you to explore Microsoft Azure Network Security capabilities. We will work to analyse your existing environment, discovering real threats to selected hybrid workloads and analysing security vulnerabilities across existing hybrid workloads. We'll also explore Microsoft Azure Network Security capabilities in a demo environment. Workshops are broken down into three areas:

### ENVISION: value conversation

- Customer priorities & requirements
- Product feature showcase

### DISCOVER: security assessment

- Threat exploration
- Demo threat investigation & response
- Vulnerability assessment

### PLAN: next steps discussion

- Azure Defender pilot/deployment
- Network Security pilot/deployment
- Cost & economic value conversation

## What we'll cover during the workshop

### Analyse

We'll carefully study your requirements & priorities for a Hybrid Cloud detection & response solution.

### Define scope & deploy

Enable Defender in your production environment, onboarding servers other selected services.

### Explore

Examine Azure Network Security capabilities & experience selected Network Security products in a demo environment.

### Discover

Reveal threats to the included hybrid workloads, plus demonstrate how to investigate & respond to threats.

### Examine

We'll inspect existing hybrid workloads vulnerabilities & discuss how to reduce the attack surface area.

### Recommend

Advocacy on next steps & how to proceed with a production implementation of Defender & Network Security.

### Workshop outcomes

- Better understand the benefits and capabilities of Azure Defender and Azure Network Security
- Discover how to prioritise and mitigate potential threats
- Learn to reduce the attack surface area for hybrid workloads
- Have defined next steps based on your needs and objectives

### Transparency's Managed Security Service

For additional peace of mind with proactive security monitoring and remediation, speak to Transparency about our Managed Security Service. The service is managed from our dedicated Security Operations Centre by our highly-trained cybersecurity experts. Get in touch to find out more!

## Get in touch

Ready to get started? Just email [hello@transparency.com](mailto:hello@transparency.com) and we will contact you with a choice of dates.
